

## # App Store Review Notes (v1.0 resubmission #2)

### ## Fixes Applied (October 14, 2025)

#### ### 1. Camera Crash Fix (CRITICAL)

- **Issue**: App crashed when accessing camera from: Expenses > + > Add manually > Add Receipt Photos > Camera
- **Root Cause**: Missing required privacy descriptions in Info.plist
- **Fix**: Added `NSCameraUsageDescription` and `NSPhotoLibraryUsageDescription` to AppInfo.plist
- **Testing**: The app will now request camera/photo permissions properly instead of crashing

#### ### 2. Sign in with Apple

- **Issue**: Reviewers reported error message during Sign in with Apple
- **Status**: The authentication implementation follows Apple's best practices. The app has extensive error handling and logging to help diagnose any issues.
- **Note for Reviewers**:
  - Please ensure the test device is signed into iCloud in Settings
  - If you cancel the Sign in with Apple sheet, this is expected behavior
  - Alternative: Use the "Prefer email and password?" option to sign in with email instead

#### ### 3. Money Transfer Functionality

**Does your app allow users to send and/or receive money?**

**Answer: NO**

Ledgex is an expense tracking and splitting calculator, similar to Splitwise. The app:

-  Tracks shared expenses in groups (trips, events, etc.)
-  Calculates who owes whom and by how much
-  Allows users to mark settlements as "received" for record-keeping
-  Does NOT facilitate actual money transfers
-  Does NOT integrate with payment processors (Stripe, PayPal, etc.)
-  Does NOT handle real currency transactions

Users settle debts outside the app (via Venmo, Cash App, bank transfer, cash, etc.) and simply mark the payment as received in LedgeX for tracking purposes.

---

## ## Previous Fixes

- **Crash Fix**: The invite icon on `TripDetailView` now opens our in-app `Share Group` sheet instead of presenting a native share controller directly, eliminating the crash seen during review. The sheet still lets reviewers share or copy the invite link.
- **Account Deletion Location**: Open any group → tap the gear icon → scroll to **Account Management** → tap **Delete My Account**. This presents a dedicated flow describing the data impact and deletes the account without any re-authentication prompts. The same flow remains accessible from the profile sheet (`Trips` list → avatar button → **Delete Account**).

## ## Test Suggestions

1. **Sign In**: Use Sign in with Apple (ensure device is signed into iCloud) or use email/password option
2. **Create a Group**: Create a trip/group and add expenses with receipt photos via camera
3. **Camera Test**: Tap Expenses > + > Add manually > Add Receipt Photos > Camera - should work without crash
4. **Account Deletion**: Open any group → gear icon → Account Management → Delete My Account
